MLP---Domain-1---Survive-AI Design Build

Started task

Port imported Vercel app to Replit

The user just imported a project from vercel.com. Port it from the imported state into Replit's PNPM_WORKSPACE stack so it runs cleanly in this environment and preserves the original app.

View plan

I've started porting your Vercel app to Replit. I'll keep the existing app intact, organize it for this workspace, set up its run command, and check that it loads correctly.

12 actions

Your app is SkillCast, with career forecasts, learning pathways, and employer and institution views. I'm preserving those screens and moving its three data endpoints into Replit's server, while keeping the existing local profile storage and database.

8 actions

The original app already has clearly Scroll to latest cks when AI services are unavailable. I'll preserve those and replace the old hosted AI SDK with Replit AI
